

Twenty IEEE Dayton PEAL Chapter and IEEE Dayton section members toured Yaskawa's Motoman Robotics facility located in Miamisburg, OH the evening of February 17th. Several dedicated Motoman employees enthusiastically showed us the Motoman technical education center, manufacturing facility, and finally the hit of the evening the

demonstration lab! Throughout the evening it was clearly evident why Motoman has become a leading automation robotics company. In addition, tour participants learned the history of Motoman from its 1980's roots out of Troy Ohio's Hobart welding corporation with the first all electric drive welding robot. The tour was very well received by everyone!
