DP&L Tour Recap:

On May 27, 2015, IEEE PEAL successfully hosted a tour of the DP&L Tait Facility. The event began in UDRI’s River Campus where Mark Sizemore provided instructions on safety and directions to the site. While on site, an introduction to the facility and description of other facilities owned by DP&L’s parent company AES was presented. Attendees were then able to observe first-hand the 20 Megawatt’s worth of battery modules and inverters, while Mark described the process by which the batteries were obtained, installed, and how they are utilized to assist with grid stabilization.
